

SCARMAN HOUSE: MODERN COMFORT AND STYLE REVAMPED!

In collaboration with Baker Hicks

CASE STUDY

Nestled at the heart of the University of Warwick campus, Scarman House is a 210-bed hotel accommodation and conference facility. This versatile establishment provides not only comfortable lodgings but also top-notch conference facilities, well-equipped meeting rooms, and enticing on-site dining options.

In the summer of 2023, the hotel underwent a three-floor refurbishment project. Towelrads, in collaboration with the architect firm Baker Hicks, was instrumental in identifying optimal heating solutions for both Electric Towel Rails and Radiators. The client's vision was to maintain a modern yet contemporary aesthetic in the individual rooms.

We take pride in crafting a bespoke solution by designing, specifying, and supplying our Pisa Chrome Electrical Towel Rails for the bathrooms. These towel rails are equipped with Smart Thermostatic Elements, enabling occupants to have complete control over time and temperature settings, ensuring a comfortable stay.

For the radiators, we selected a range of Vertical and Horizontal Windsor Column Radiators. This option added a touch of modernity blended with a hint of retro charm to the rooms, all while delivering exceptionally high heat outputs.

Throughout this project, the collaborative partnership proved essential in navigating and meeting the challenging project timelines, ensuring its successful and timely completion.
